POWERFUL & LOW POWER CONSUMPTION

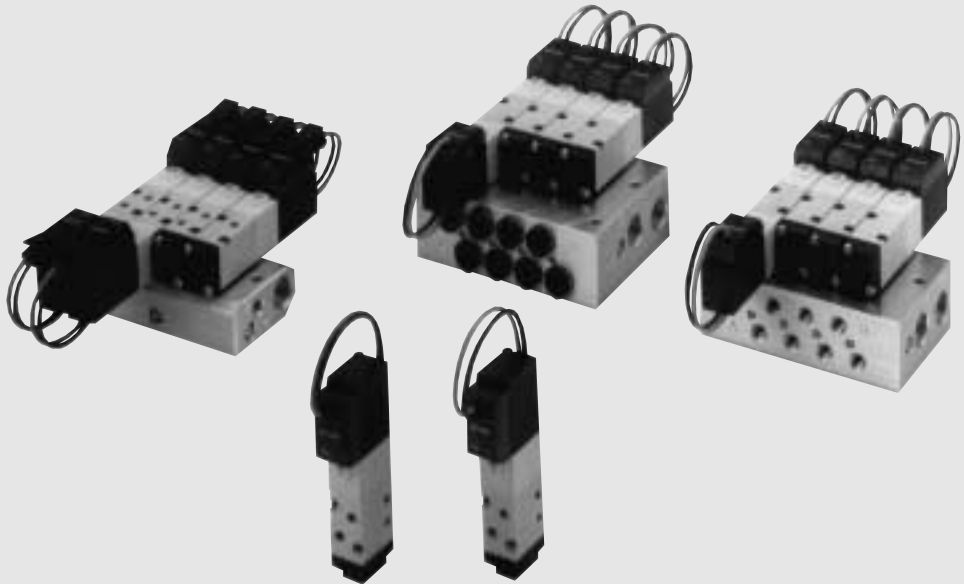

SOLENOID VALVES 040 SERIES

The solenoid valve 040 series achieves its highly reliable, powerful and low current basic performance into a thin body with valve width of 10mm.

These reliable 2-, 3-, 5-port pilot type solenoid valve has features of flywheel diodes for surge suppression as standard equipment.

Moreover, the 040 series line-up features detailed improvements in utility, including an AJ type manifold that offers excellent ease of assembly and maintenance, a twin solenoid whose length, wiring, and piping are the same as the single solenoid while maintaining functions of a double solenoid, and a PC board manifold containing a print circuit board with connector.

SOLENOID VALVES 040 SERIES

● Pilot type solenoid valve
● 2-, 3-, 5-port
● Effective area 1.5mm²
● Power consumption 0.7W

Optimum for operation of $\phi 6 \sim \phi 25$ double acting and single acting cylinders, pilot-operated valves and actuators, etc.

PC BOARD MANIFOLD 040 SERIES

- Pilot type solenoid valve
- 2-, 3-, 5-port
- Effective area 1.5mm²
- Power consumption 0.7W
- Only available for 8 stations and 16 stations.

TWIN SOLENOID VALVES 040 SERIES

New space-saving type valve is installable with the solenoid valve 040 series and the 040 series PC board manifold.

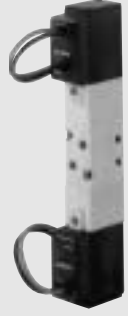

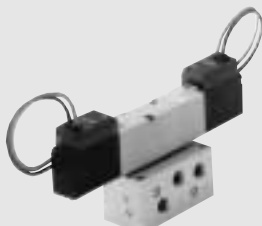

Retains the basic performance and functions of a double solenoid while also achieving the piping and wiring configuration of a single solenoid.

- Pilot type solenoid valve
- 5-port
- Effective area 1.5mm²
- Power consumption 0.7W

Basic Models and Configuration of 040 Series

Single unit

		Pilot type solenoid valve				
		040 series				
		2-, 3-port		5-port, 2-position		
Direct piping	Normally closed (NC)	Normally open (NO)	Single solenoid	Double solenoid	Twin solenoid	
						
	041E1 (□ 040E1 ^{Note})	041E1-11 (□ 040E1-11 ^{Note})	040-4E1	040-4E2	□ 040-4KE2 ^{Note}	
Sub-base piping	Normally closed (NC)	Normally open (NO)	Single solenoid	Double solenoid		
						
	A041E1-25	A041E1-11-25	A040-4E1-25	A040-4E2-25		

Note: The 040E1, A040E1, and 040-4KE2, A040-4KE2 are for manifolds for combined mounting of 2-, 3-, 5-port valves. They cannot be used as a single unit. When using 2-, 3-port valves as a single unit, please use 041E1, A041E1-25.

Manifold

040 series

Small sized manifold for 2-, 3-port valve

041M□F—F type (P, R) manifold

041M□A—A type (all port) manifold

041M□AJ—AJ type (all port, with quick fitting) manifold

Manifold for combined mounting for 2-, 3-, 5-port valve

040M□F—F type (P, R) manifold

040M□A—A type (all port) manifold

040M□AJ—AJ type (all port, with quick fitting) manifold

SOLENOID VALVES 040 SERIES

PC board manifold

040M□FP—F type (P, R) manifold

040M□AP—A type (all port) manifold

Twin solenoid valve

040M□F—F type (P, R) manifold

040M□A—A type (all port) manifold

040M□AJ—AJ type (all port, with quick fitting) manifold

Note: Only available for 8 stations or 16 stations.

SOLENOID VALVES

040 SERIES

Basic Models and Valve Functions

Item	Basic model	Direct piping, F type manifold	041E1 (040E1 Note)	040-4E1	040-4E2	040-4KE2 Note
		Sub-base piping, A, AJ type manifold	A041E1 (A040E1 Note)	A040-4E1	A040-4E2	A040-4KE2 Note
Number of positions		2 positions				
Number of ports		2, 3 ports	5 ports			
Valve function		Normally closed (NC, standard) or Normally open (NO, option)	Single solenoid	Double solenoid	Twin solenoid	

Remark: For optional specifications and order code, see p. 104 ~ 105.

Note: The **040E1**, **A040E1**, and **040-4KE2**, **A040-4KE2** are manifolds for combined mounting of 2-, 3-, 5-port valves.

They cannot be used as a single unit. When using 2-, 3-port valves as a single unit, please use **041E1**, **A041E1-25**.

Specifications

Item	Basic model	Direct piping, F type manifold	041E1 (040E1)	040-4E1	040-4E2	040-4KE2
		Sub-base piping, A, AJ type manifold	A041E1 (A040E1)	A040-4E1	A040-4E2	A040-4KE2
Media		Air				
Operation method		Internal pilot type				
Effective area [Cv] Note 1		mm ²	1.5 [0.08]

Color of LED indicator		Red				
Surge suppression (as standard)		Flywheel diode				

Note: See made to order on p. 105.

Cylinder operating speed

How to obtain cylinder speed

To obtain the time required for the cylinder to complete 1 stroke, add cylinder's delay time, t_1 (time between energizing of solenoid valve and actual starting of cylinder), to the cylinder's max. operating time, t_2 .

When a cushion is used, add the cushioning time, t_3 , to the above calculation. Standard cushioning time t_3 is approximately 0.2 seconds.

040-4E1

Measurement conditions

- Air pressure: 0.5MPa {5.1kgf/cm²}
- Piping inner diameter and length: ϕ 2.5×1000mm
- Fitting: Barb fitting BF4BU-M3
- Load ratio = $\frac{\text{Load}}{\text{Cylinder theoretical thrust}}$ (%)
- Cylinder stroke: 60mm (ϕ 10, ϕ 16)
100 mm (ϕ 20 ~ ϕ 32)

Maximum operating speed

Delay time

Flow Rate

How to read the graph

If supply pressure is 0.5MPa and flow is 75 l/min (ANR), the valve outlet pressure becomes 0.4 MPa.

Effective Area [Cv]

mm²

Basic model	Standard (single valve)	Remarks

- Valve mounting location from the left-hand side when facing A, B port (□ : 1~20)
- Since twin solenoid valve needs two stations per valve to mount, the second station (solenoid S1 side) should be blank.

- Specify the valve type for each station.
- Enter -BP when closing a station with a block-off plate without mounting a valve.
- □040-4KE2 cannot be assigned to the last station when ordering.

Made to Order

Handling Instructions and Precautions

Solenoid

Internal circuit

● DC5V, DC6V, DC12V, DC24V

Standard solenoid (surge suppression)

Solenoid with LED indicator (surge suppression)

Order code : -PSL, -PLL

※The PC board manifold is DC24V only.

- Cautions:**
1. Do not apply megger between the lead wires.
 2. While there is no danger with a DC solenoid of a short circuit due to the wrong polarity, the valve will not operate.
 3. Leakage current inside the circuit could result in failure of the solenoid valve to return or in other erratic operation. Always use within the range of the allowable leakage current. If circuit conditions, etc., cause the leakage current to exceed the maximum allowable leakage current, consult us.
 4. For double solenoid and twin solenoid, avoid energizing both solenoids simultaneously. The valve could fall into a neutral state.

Plug connector

Attaching and removing plug connector

Use fingers to insert the connector into the pin, push in until the lever claw catches on the convex section on the connector housing, and complete the connection.
To remove the connector, squeeze the lever along with the connector, lift the lever claw up from the convex section on the connector housing, and pull out.

※Illustration shows the 110 series.

Crimping of connecting lead wire and contact

To crimp lead wires into contacts, strip off 4 mm of the insulation from the tip of the lead wire, insert into the contact, and crimp it. Be sure at this time to avoid catching the insulation on the wire as crimping section.

- Cautions:**
1. Do not pull hard on the lead wire.
 2. Always use the dedicated tool for crimping of connecting lead wire and contact.
Contact: Model 702062-2M
Manufactured by Sumiko Tech, Inc.
Crimping tool: Model F1-702062
Manufactured by Sumiko Tech, Inc.

Attaching and removing contact and connector

Insert the contact with lead wire into a plug connector hole until the contact hook catches and is secured to the plug connector. Confirm that the lead wire cannot be easily pulled out.

To remove, insert a tool with a fine tip (such as a small screwdriver) into the rectangular hole on the side of the plug connector to push up on the hook, and then pull out the lead wire.

- Cautions:**
1. Do not pull hard on the lead wire. It could result in defective contacts, breaking wires, etc.
 2. If the pin is bent, use a small screwdriver, etc., to gently straighten out the pin, and then complete the connection to the plug connector.

Manual override

Non-lock type

To operate, press the manual override all the way down. The valve works the same as an energized state as long as the manual override is pushed down, and returns to the rest position upon release.

In the double solenoid and twin solenoid, pressing the manual override on the S1 (S2) side switches the state of the S1 (S2) to energized state, and the unit remains in that state even after the manual override is released. To return to the rest position, operate the manual override on the S2 (S1) side.

Lock type

To lock the manual override, use a small screwdriver to push down on the manual override all the way down and turn it clockwise 45 degrees. When locked, turning the manual override 45 degrees in a counterclockwise direction returns it to its original position, and releases the lock.

※Illustration shows the 240 series.

- Cautions:**
1. The 040 series are pilot type solenoid valves. As the result, the manual override cannot switch the main valve without supplying air from the P port.
 2. Always release the lock on the locking type before commencing normal operation.
 3. Do not attempt to operate the manual override with a pin or other object having an extremely fine tip. It could damage the manual override button.

PC BOARD MANIFOLD 040 SERIES

Manifold Basic Models and Specifications

Item	Basic model		Manifold function		P, R manifold		All port manifold	
			Number of units	8 stations				
			16 stations		040M8FP		040M8AP	
					040M16FP		040M16AP	
Type of mounting valve	2-, 3-port				040E1		A040E1	
	5-port, single solenoid				040-4E1		A040-4E1	
	5-port, double solenoid				040-4E2		A040-4E2	
	5-port, twin solenoid				040-4KE2		A040-4KE2	
Wiring			Connector type for flat cable (AWG28) ^{Note 1} : With short clip (standard) With long clip (option) ^{Note 2}					
Common wiring			Plus common (standard) Minus common (option: -CM) ^{Note}					
Operating temperature range (atmosphere and media) °C			5~50					
Shock resistance m/s ² {G}			245.2 {25.0}					
Mounting direction			Any					

Notes: 1. For details about specifications, see the specifications of connector for flat cable.
2. For order codes, see p. 119.

Solenoid Valve Specifications

Item	Basic model		Manifold function			
	For FP type manifold	For AP type manifold	040E1	040-4E1	040-4E2	040-4KE2
Media	Air					
Operation method	Internal pilot type					
Effective area [Cv]	mm ²		1.5 {0.08}			
Lubrication	Not required					
Operating pressure range MPa {kgf/cm ² }	0.2~0.7 {2.0~7.1}					
Proof pressure MPa {kgf/cm ² }	1.05 {10.7}					
Response time ^{Note} ms	DC5V, DC12V		Max. 12/15	12	Max. 12	
ON/OFF	DC6V, DC24V		Max. 12/15	12	Max. 12	
Maximum operating frequency	Hz		5			
Minimum time to energize for self holding	ms		—		50	

Note: Values when air pressure is 0.5MPa (5.1kgf/cm²). Values of 040-4E2 and 040-4KE2 are switching from the opposite position.

Remark: Conversion to psi., 1MPa=145psi., 1kgf/cm²=14.2psi., e.g. 0.2MPa=29psi.

Solenoid Specifications

Item	Rated voltage		Manifold function			
	DC 5V	DC 6V	DC 12V	DC 24V		
Type	With built-in flywheel diode for surge suppression					
Operating voltage range DC V	4.5~5.5 (5±10%)	5.4~6.6 (6±10%)	10.8~13.2 (12±10%)	21.6~26.4 (24±10%)		
Current (Power consumption when rated voltage is applied: W)	130 (0.7)	115 (0.7)	65 (0.8)	40 (1.0)		
Maximum allowable leakage current	10	7	5	2		
Insulation resistance MΩ	Min. 100					
Wiring	Plug connector type straight connector -PSL : With dedicated lead wire for PC board connection, with connector					
Color of lead wire	Red (+), Black (-)					
Color of LED indicator	Red					

Specifications of Connector for Flat Cable

Item	Header		Socket ^{Note}		Strain relief ^{Note}		Standard	
	Order code							
Blank		Box type, with short clip (Product number: 3662-5002SCSC)	Open end type, with nose (Product number: 7910-6500SC)		—		MIL-C-83503 conformity (made by Sumitomo 3M Ltd.)	
-LC		Box type, with long clip (Product number: 3662-5002LCSC)			With attached (Product number: 3448-7910J)			

Remark: While the connector has a center slot (groove), note that it has no key grooves for prevention of erroneous insertion.

Note: Included at time of delivery.

Flow Rate

How to read the graph

If supply pressure is 0.5MPa and flow rate is 75 l/min (ANR), the valve outlet pressure becomes 0.4 MPa.

Manifold Connection Port Size

Manifold model	Port	Location of piping connection	Port size
040M□FP	P	Manifold	M5×0.8
	A, B	Valve	M3×0.5
	R	Manifold	Rc1/8
040M□AP	P	Manifold	Rc1/8
	A, B		M5×0.8
	R		Rc1/8
	PR		(Common for R, PR)

Mass

Manifold model	Manifold Mass	Mounting valve mass				Block-off plate
		<input type="checkbox"/> 040E1	<input type="checkbox"/> 040-4E1	<input type="checkbox"/> 040-4E2	<input type="checkbox"/> 040-4KE2	
040M8FP	122	22	22	37	45	3
040M16FP	229					
040M8AP	217	22	22	37	45	4
040M16AP	396					

PC Board Manifold 040 Series Order Code

		Common wiring		Connector		2-, 3-port valve Number of ports		2-, 3-port valve Valve function		Wiring	
		Plus common		With short clip		3-port		Normally closed (NC)		Straight connector with LED indicator	
		Minus common		With long clip		2-port		Normally open (NO)			
			Blank		Blank		Blank		Blank	-PSL	
			-CM		-LC		-2		-11		

		Manifold model Number of units			Station	Basic model			Voltage			
PC board manifold for combined mounting of 2-, 3-, 5-port valve	040M	8	16	FP	-CM	-LC	stn. <input type="checkbox"/>	-040E1	-2	-11	-PSL	DC5V DC6V DC12V DC24V
							stn. <input type="checkbox"/>	-040-4E1				
							stn. <input type="checkbox"/>	-040-4E2				
							stn. <input type="checkbox"/>	-040-4KE2				
				AP	-CM	-LC	stn. <input type="checkbox"/>	-A040E1	-2	-11	-PSL	DC5V DC6V DC12V DC24V
			stn. <input type="checkbox"/>	-A040-4E1								
			stn. <input type="checkbox"/>	-A040-4E2								
			stn. <input type="checkbox"/>	-A040-4KE2								

Remark: 040E1 is 3-port, and normally closed (NC) as standard.

- Valve mounting location from the left-hand side when facing A, B port (□: 1~16)
- Since twin solenoid valve needs two stations per valve to mount, the second station (solenoid S1 side) should be blank.
- When selecting 040-4E2, always enter -BP for the next station.

- Specify the valve type for each station.
- Enter -BP when closing a station with a block-off plate without mounting a valve.
- 040-4E2 cannot be mounted to the last station.
- 040-4KE2 cannot be assigned to the last station when ordering.

Additional Parts (Sold Separately)

Block-off plate

● 040 M[F]-BP

F—For FP type manifold
A—AP, AJP type manifold

Made to Order For details, see p. 122.

Handling Instructions and Precautions (PC Board Manifold)

Solenoid

Circuit configurations

● For plus common type (standard)

Operation example

Corresponding to sequencer

Output module is minus common type.

● For minus common type (option: -CM)

Operation example

Corresponding to sequencer

Output module is plus common type.

Cautions: 1. Do not apply megger between the lead wires.

2. While there is no danger with a DC solenoid of a short circuit due to the wrong polarity, the valve will not operate.
3. Leakage current inside the circuit could result in failure of the solenoid valve to return or in other erratic operation. Always use within the range of the allowable leakage current. If circuit conditions, etc., cause the leakage current to exceed the maximum allowable leakage current, consult us.
4. For double solenoid and twin solenoid, avoid energizing both solenoids simultaneously. The valve could fall into a neutral state.
5. Ensure that voltage drops due to resistance in the cable used remains within the voltage range for the solenoid valve.
If the supplied voltage fails to reach the minimum required voltage, the valve could fail to operate properly.

Plug connector

Attaching and removing plug connector

Use fingers to insert the connector into the pin, push in until the lever claw catches on the convex section on the connector housing, and complete the connection.
To remove the connector, squeeze the lever along with the connector, lift the lever claw up from the convex section on the connector housing, and pull out.

Cautions: 1. Do not pull hard on the lead wire. It could result in defective contacts, shorted lines, etc.

2. If the pin is bent, use a small screwdriver, etc., to gently straighten out the pin, and then complete the connection to the plug connector.

Dedicated lead wire for PC board connection

Order code by one unit

(Number of wires to use)

	Order code	□040E1	□040-4E1	□040-4E2	□040-4KE2
For standard	Y160208	1	1	1	2
	Y160209 ^{Note}	0	0	1	0
For -CM	Y160225	1	1	1	2
	Y160226 ^{Note}	0	0	1	0

Note: Y160209 and Y160226 are for dedicated lead wires for double solenoid (solenoid S1 side).

Connector for flat cable

Manifold

Print circuit board

Avoid use in the locations listed below, as it may result in deterioration of the print circuit board or shorts in the wiring. If use in such conditions is unavoidable, always provide a cover or other adequate protective measures.

1. Locations subject to high levels of dust or oil mists.
2. Locations subjected to salt, corrosive gases or conductive particles.
3. Locations directly subject to condensation, direct sunlight or other weather effects.

Combined mounting for different type of valves

In the 040 Series manifold for combined mounting of 2-, 3-, 5-port valves and PC board manifold for combined mounting of 2-, 3-, 5-port valves, single solenoids may be combined with double solenoids, or with twin solenoids, and a total number of up to 8 or 16 solenoids can be mounted.

In this case, observe the following precautions.

1. Always use a block-off plate (-BP) to close the right station (the side with the higher numbered station) of the station where the double solenoid valve is mounted.
2. If using block-off plates (-BP) for some reason other than the above Item 1, place them on the higher numbered stations side.
3. Connector pin numbers are allocated to stations in order from the left end of the manifold. For a double solenoid mounting, the upper pins are allocated to S2 and the lower ones to S1, with the upper S2 numbers being allocated the smaller pin numbers. And for a twin solenoid mounting, the left side is allocated to S2 and the right side to S1, with the left-side S2 numbers being the smaller pin numbers.

Example of an 8 units manifold, with 4 single solenoid valves and 2 double solenoid valves mounted

Connector pin locations for 8 units

Remark: The standard is plus common wiring. Minus common wiring is optional (-CM).

Example of an 8 units manifold, with 3 single solenoid valves and 2 double solenoid valves mounted

Connector pin locations for 8 units

Remark: The standard is plus common wiring. Minus common wiring is optional (-CM).
